

# Women's Safety

*Your Wellbeing, Our Priority*

# PROBLEM STATEMENT

Incidents of sexual assault and threats to women's safety in public spaces often go unnoticed due to the lack of proactive surveillance and timely intervention. Existing CCTV systems are underutilized, primarily serving as evidence rather than tools for real-time threat detection and prevention.

# SOLUTION

- Our project integrates AI with existing CCTV systems to detect threats or sexual assaults against women in public spaces.
- Facial Recognition technique for detecting individuals.
- Harassment Detection AI model for identifying unusual activities or behaviours which helps in preventing the future occurrences.
- By analyzing video feeds in real time, the system identifies incidents, alerts the control room, and facilitates swift police intervention to prevent situations getting worse.
